DEPARTMENT OF ANATOMICAL PATHOLOGY

SANAS Accredited Medical Laboratory, No. M0199

M0199

EPISODE NUMBER:
SA04381404

CLINICAL HISTORY:
49 year old female. Right breast lump. ? Malignancy versus cyst.

MACROSCOPY:
Specimen consists of multiple fragmented tissue cores, the longest measuring 5mm in length.

MICROSCOPY:
Sections show fragments of free-lying laminated keratin strands, adipose tissue and fibrous tissue with numerous multinucleate giant cells. The specimen is negative for malignancy.

PATHOLOGICAL DIAGNOSIS:
Right breast mass, biopsy:
- Consistent with ruptured epidermoid cyst.

Reported by: Dr N. da Costa.

Authorised by : **Wu, H Dr 08/12/2020 18:31**
